Health and Psychosocial Instruments (HaPI)

*Health and Psychosocial Instruments (HaPI) is a database that provides access to information on approximately 15,000 measurement instruments (i.e. questionnaires, interview schedules, checklists, coding schemes, rating scales, etc.) in the fields of health and psychosocial sciences.*

*Source: Behavioral Measurement Database Services (BMDS)*

The full-text of the instruments are not included in the database; however, HaPI can be used to:

* Discover what instruments exist;
* Determine the availability of reliability and validity evidence;
* Track the history of an instrument over time;
* See what other instruments have already developed in your field of study;
* Locate ordering information for a known instrument.

Information in the database is abstracted from hundreds of leading journals covering health sciences and psychosocial sciences. Additionally, instruments from Industrial/Organizational Behavior and Education are included.

**Broad and Specific Subjects:**

- Medical Humanities
  - Medical Education; Medical Informatics & Library Science; Medical Research

**Access Options:**

- Ovid Internet, updated Quarterly
- SilverPlatter Internet, updated Quarterly
- SilverPlatter Local, updated Quarterly

**Interface:**

- OvidSP

**Other Information:**

- Coverage: 1985 - Present
- Number of Records: 145,000+
- Data Type: Bibliographic with Abstracts
